Examination requested by: Boston

Reference: Letter dated May 15, 1980

Examination requested: Document - Fingerprint - Authorship Identification

Remarks: The identification in the Anonymous Letter File
was made by Document Analyst []

An authorship identification analysis of linguistic aspects of language style, vocabulary, spelling, punctuation, content and syntax, was conducted on a photocopy of Q8. The results of this examination indicate the author of Q8 is most likely the same individual who authored Q1 through Q7, and that this individual is probably a Caucasian male, over 55 years old, who learned English as a second language in the United States probably after high school age, and who seems to have a European influence in his background, possibly Italian or German.

Since identification by the linguistic method is not considered a positive means of identification, results of such examinations are provided for investigative guidance only, and no report will be submitted. A copy of Q8 will be retained in the Technical Evaluation Unit for possible future comparisons.
